

STUDENTS' PRESENTATIONS ON CLIMATE CHANGE

STUDENTS' PRESENTATIONS ON CLIMATE CHANGE

As a part of the school's engagement with the prevention of global warming and the fight against climate change, the 4th year students as well as the 3rd A group students have been asked to give a speech on a topic related to climate change on a weekly basis.

As a sort of warm-up, the students were shown a YouTube vid on climate change in class. The vid's based on a New York Times article and offers a broad perspective on the issue, ranging from the causes of climate change to the possible different scenarios where climate change may take us to, without ignoring the most immediate effects that climate change has on our daily lives.

The vid led to an enriching and vivid debate about the different ways in which we take on climate change both as individuals and as a social group. It also brought about topics such as the role of politicians and big companies and the importance that it is us, common citizens, who have the responsibility to get the ball rolling and not only blaming politicians and those big companies for not taking their share while we sit on the sofa and do nothing but voting for the same establishment parties every four years.
